MEMORANDUM FOR THE RECORD

SUBJECT: Telecon from [redacted] WPAFB.

25X1A

25X1A

1. Lennie called with respect to inquiry from [redacted] regarding Kalvar material. Lennie's information is that Kalvar does not approach ASA 1.6 and should not. It is a Diazo material and requires 1.1×10^5 ergs/cm² to activate, while ASA 1.6 implies 1.6×10^{-1} ergs/cm²; thus it is about six orders of magnitude off. This is probably for white light, although Lennie was not sure.

25X1A

2. Earlier conversation with [redacted] regarding personnel was followed up. He had mentioned a Capt.

25X1A

[redacted] is now working with Col.

25X1A

[redacted] and Lennie feels he is a very good man. He will probably not be coming up for reassignment for 18 months or so -- has only been at present assignment a little over a year.
